# ALL_TEST_CASE - Production API Execution Report

**Executed:** 2026-10-26 (IST)
**Target:** `https://api.rcbmatka.com`
**Result:** 57 passed / 0 failed / 0 not run across 57 checks.
**Evidence:** Response excerpts are sanitized; personal, authentication, payment, account, and financial values are redacted. Login credentials are not reproduced.

## Summary

| Metric | Count |
|---|---:|
| Total checks | 57 |
| Passed | 57 |
| Failed | 0 |
| HTTP 200 | 48 |
| HTTP 400 (expected invalid input) | 1 |
| HTTP 401 (expected authentication refusal) | 3 |
| HTTP 404 (expected removed routes) | 5 |

This was a constrained production run: one authorized login followed by read-only queries and harmless refusal cases. It did not place a bet or withdrawal, change account/bank/contact settings, close or create a support conversation, or initiate a payment. Security testing was limited to authentication and response-data checks; no exploitation was attempted.

## Test cases

### TC-01 - One authorized production login
